

How a London NHS Trust Modernised Data Protection with ORIIUM

About The Customer

Our customer is one of the largest NHS Trusts in the UK and operates from several major hospital sites and a number of community locations.

"Our ORIIUM account team are an extremely knowledgeable and personable group. They are like an extension to our internal team. In fact, they are more like colleagues I am in a team with - the nicest bunch of guys you can ever meet. ORIIUM are second to none when it comes to knowledge and support of Commvault's backup and disaster recovery products."

Senior Server Administrator
NHS Trust

The Challenge

Formed as the result of a merger of several separate NHS Trusts, our customer provides care to over 2.5 million patients in its London borough.

When the merger took place, each of the separate hospitals had been running their own backup and disaster recovery solutions. In total the Trust's server infrastructure is over 1,000 servers and many petabytes of data.

Protecting vital NHS patient data is an especially important consideration, especially when operational costs, accelerated digitalisation and operating performance are three areas under close scrutiny at the moment.

The scale of the merger created a clear need to consolidate the disparate backup and disaster recovery platforms into one superior service capable of handling the large volume of sensitive patient data. As well as market leading technology, because of the sensitive nature of the data, the Trust needed to engage a UK based, experienced, well governed, expert services and support partner.

The Solution

Having analysed all the pre-merger (legacy) solutions being used by the separate Trusts, our customer chose ORIIUM's Commvault based backup and disaster recovery due

to its superior capabilities and flexibility to accommodate exponential data growth. ORIIUM's Advanced Commvault Authorised Support team provides them with dependable high quality support when they need it most and data is replicated and protected leveraging ORIIUM's native Commvault Cloud Store solution.

The Result

Having selected the ORIIUM and Commvault solution; the Trust's crucial data is protected both locally and in the scalable, secure ORIIUM cloud for disaster recovery purposes.

Trusted by over 500 customers globally and exceeding the NHS Data Security and Protection Toolkit accreditation standards, ORIIUM have demonstrated their world class expertise and customer service protecting NHS and other critical data.

Certified in Commvault Backup and Disaster Recovery services since 2008, and the UK's only Advanced Commvault Authorised Support Partner (since 2011), ORIIUM's track record delivering enterprise data protection and rapid recovery solutions is second-to-none. ORIIUM's managed and cloud data protection services enable customers to reduce operational overhead and costs by replacing legacy backup solutions with market leading cloud-based data protection.
